Assignment Solutions

Respected Sir,

As I received your message regarding solving of three assignment questions and I tried to solve myself solve the them. I made some research on **Zauba Technologies & Data Services Private Limited, Bangalore.** I found that the company is a platform for importing data, exporting data at reduced cost, managing all the users records with secure payment and making use of data around 190 countries, I felt that is a great work.

Solutions:

1). These are the 5 major **risks** that we may face as I felt.

- Gathering Data from Many Public Sites and Maintaining that vast Data and making available to users that requires new technologies and new algorithms and new architectures.
- Protecting the collected data from hack attempts.
- Analyzing the collected data quoting the price and allow them use is a big task.
- Making the users to do concurrent import and export actions simultaneously.
- Managing All Client Satisfaction towards the data we provided.

2). These are 5 major **improvements** need for zaubacorp.com as I felt:

- Put Login to All Fields in Zaubacorp.com to avoid data misuse as i feel in security concern.
- Make The test feel length to be looking good they are too good.
- Put follow up link to be in the down of the site since it will irritate the users.
- Add Some more fields to the search companies and allow it by login only.
- Make the home page to be less font it was not feel good it was with high font.

3). I had Attached a file (.zip) with this regarding a **web based chat application** with full code, instructions and requirements for that are mentioned in it(.zip) file.

Thanking You Sir,

Yours Sincerely.
